EXPERIENCE

Capmob Financial Services

June 2026 – Aug 2026

AI Engineer Intern

Bengaluru, India

- Helped in architecting a **10-agent, two-sided Agentic AI lending platform** end-to-end **5 borrower-side agents** (document intelligence, credit narrative, deal tracking, education, CapBot) and **5 lender-side agents** (deal discovery, risk intelligence, portfolio, compliance, preference engine) connected via a central matching engine
- Owned development of **CapBot's document intelligence pipeline** end-to-end RAG-based classification, extraction across document types (bank statements, trade licenses, salary certificates), structured dataframe output, and PII guardrails ahead of downstream credit analytics
- Managed the platform's **AWS Bedrock** integration (Nova Micro) powering the agent pipeline's LLM calls, including **CloudWatch** monitoring, alarms, and log tailing for production reliability

Stremly

Apr 2026 – June 2026

AI Engineer Intern

Bengaluru, India (Remote)

- Architected and validated a **6-agent multi-agent system** for end-to-end project execution, enabling autonomous planning, reasoning, and task orchestration across production workflows
- Built an **API status monitoring page** for agentic pipelines, reducing time-to-detect failed production APIs **from hours to minutes** and enabling faster incident response
- Designed **API integration test suites** covering inter-agent communication and external services, improving reliability of production agent workflows

PROJECTS

Onboarding Assistant (RAG-Eval) | GitHub | LangGraph, FAISS, BM25, Groq, Tavily, LangSmith, scikit-learn

Benchmarked Multi-Agent RAG System

- Built and benchmarked **three progressively sophisticated RAG architectures** (naive, Corrective RAG, Supervisor-routed multi-agent) head-to-head with a real evaluation harness CRAG's web-search fallback lifted out-of-domain retrieval relevance from **0.0 to 0.969**, at roughly **2x the latency**
- Designed a **Supervisor-routed multi-agent system** with hop/reflection caps as safety valves; found and fixed **3 real failure modes** via testing, including a fabricated-content case caught by adding an explicit groundedness check

Autonomous SOC Analyst (CyberCortex) | GitHub | LangGraph, Elasticsearch, AWS CloudTrail, MITRE ATT&CK, FastAPI, Next.js

Hybrid Cloud + On-Premise Threat Detection Platform

- Built a **LangGraph agentic loop** that processes security logs, reconstructs multi-stage attack chains, and maps behaviors to **13 MITRE ATT&CK techniques** across on-premise and AWS iterating until confidence exceeds 70%
- Engineered a **cross-environment correlation engine** linking on-premise logs with AWS CloudTrail to detect lateral movement, with a **RAG pipeline** (ChromaDB) for historical incident retrieval and automated AWS remediation for critical incidents

SKILLS

Agentic Systems: LangGraph, LangChain, Model Context Protocol (MCP), Multi-Agent Orchestration, Retrieval-Augmented Generation (RAG), Hybrid Search (FAISS + BM25), LangSmith

Databases: MongoDB, PostgreSQL, Redis, ChromaDB, Elasticsearch

Cloud & Infrastructure: AWS (Bedrock, ElastiCache, CloudTrail), Docker, GitHub Actions, CI/CD, REST APIs, OAuth

Machine Learning & NLP: PyTorch, Transformers, HuggingFace, scikit-learn, Numpy, Pandas

Languages & Tools: Python, TypeScript, Java | Git, Jupyter, Postman

ACHIEVEMENTS & EDUCATION

3rd Place – Inter-College Hackathon

Dec 2024

Built AI Driver Assistance System (YOLO + OpenCV) for real-time dizziness and obstacle detection

DSCE

Dayananda Sagar College of Engineering (DSCE)

Expected Aug 2028

B.E. Computer Science

Bengaluru, India
